Separett – a complete toilet system for vacation and residential homes

Enjoy your cottage
For 30 years, Separett has manufactured toilets designed to satisfy your need for comfort – wherever you may be. You should feel right at home when you are at your cottage, vacation home or anywhere else where there is no access to a plip system. Thanks to the continual development of technology, design and functionality, Separett toilets are more advanced than ever. That is why Separett toilets are used all over the world, from the dry heat of Africa to the icy cold of Greenland.

Benefits for the environment
Separett wants to contribute to a clean and sustainable environment for present and future generations. A Separett toilet needs neither water to flush with, nor expensive sewage treatment, nor the space to store the greywater that is a by-product of flushing. This considerably reduces the amount of water that you need, and at the same time decreases the amount of unpleasant odours. Moreover, it is very easy to install, has no moving parts and requires very little user intervention. The EnEkjector tank includes the following accessories when the tank is full. The EnEkjector tank is a plastic injection moulding that can be smelt out and automatically flushed away for sufficient sewage treatment or to a leaching bed. When emptied every second or third week. A float indicator is fitted to the greywater system to give you an indication of the greywater volume when emptied every second or third week. **Separett® VILLA®**

**Model 9200 • Feels like home**

With the Villa 9200, the standard for environmentally friendly toilets has been set higher than ever before. It ensures that even experienced users are unaware of the difference between the Villa 9200 and the standard. The Villa 9200 is comfortable, easy to install, quick to use, and requires no maintenance beyond cleaning, making it the perfect choice for anyone looking for a high-quality, low-maintenance toilet solution.

**Separett® CHILD SEAT**

The Separett child seat with a division for liquids and solids is included with the Villa 9200. It is also suitable for the models 300 and 170 for Rescue Camping. The child seat gives a feeling of security against the toilet seat and is easy to clean.

**Separett® PRIVY**

Model 500 • Upgrade your toilet

The Separett Privy is a water-separation toilet that can be easily installed in an existing product line. Users and visitors enjoy quick sepation, separation-type toilet comfort, and the substantially reduced humidity in the room itself. The Privy is built into a house or building, ensuring that the toilet is always in sight and that odours disappear into a central collection system.

**Separett® INSULATED SEAT**

Model 300 • Comfort for frosty days

Please use the seat on outdoor toilets. Note: diameter 17.7” (450 mm). Made from reinforced plastic.

**Separett® RESCUE CAMPING**

Model 25 • The anywhere loo

Rescue Camping is perfect when in need of a temporary loo, e.g. in cottages, boats, RV’s, camps, guesthouses and buildings. It is the ideal portable alternative, especially for those who require a ready-to-assemble toilet for initial or extra hygiene reasons. The Rescue Camping is easy to install and is available in different parts, including the toilet unit, vent kit, and a practical equipment bag.
Soakaway Tank
5-year guarantee
is supplied complete for simple installation, with a venting pipe (Ø75 mm) to go through 9200 temperature. It can be placed according to your needs and fastened to the wall or floor. The Villa 9200 can be rotated so that the contents are evenly distributed.

Easy handling of end products
A natural fertilizer
The waste can quickly become an excellent product. Just fill the container and place it in a suitable location outside. Add some soil and put the lid on with a tight opening, which allows the solids to ferment. This process sterilizes human pathogens so that it can eventually be composted and buried, in order to decompose fully. The end product is an organic fertilizer in your flower garden.

Separett® VILLA®
Model 9200  Feels like home
With the Villa 9200, the standard for environmentally friendly toilets has been set higher than ever before. The Toilet Villa 9200 can be installed in both urban and rural locations, and will work perfectly well irrespective of the room temperature. It can be placed according to your needs and fastened to the wall or floor. The Villa 9200 is supplied complete for simple installation, with a venting pipe (Ø75 mm) to go through a wall and a 4 1/2 feet (2 m) long hose for urine waste.

Separett® CHILD SEAT
The Separett child seat is a decision for liquids and solids is included with the Separett Villa II. It is also for the models 300 and Rescue Camping. The child seat gives a firm hold against the urine tank and is easy to clean.

Easy change of container
On the lid over the container, there is a sliding surface to remove the container from the Urine separating kit, which includes a vent pipe (Ø75 mm) for the waste, a bag to the container to simplify cleaning, and 9200 vent pipes to be purchased if required.

Fresh restroom air
The Villa 9200 is supplied complete with a fresh restroom air. This can be obtained from your local Environmental Protection, Public Health and Building Rescue Camping

Separate® PRIVY
Model 500  Upgrade your outlet
The Separett Privy is a urine-separation kit that can be easily fitted into an existing product line. Urine and solids are kept separate, letting type outdoor designer and the substantially reduced input in any that is built. The outlet is built in a house in a sanitary tank. Containers and bags for solids and paper are available as optional extras. Functioned in the line of the distribution line, within, which enables a continuous end."
Separett® VILLA®

Model 9200 • Feels like home

With the Villa 9200, the standard for environmentally friendly toilets has been set higher that even demands of design, stability, comfort and ease. It is the equal of a modern WC in every way.

Villa 9200 is supplied complete for simple installation, with a venting pipe (Ø75 mm) to go through a wall and a 6 1/2 feet (2 m) long hose for urine waste.

Easy handling of end products

A natural fertilizer

The natural waste can become an excellent fertilizer. Just fill out the container with urine and place it in a suitable location outdoors. Add some soil and put the lid on with a slight opening; this allows the urine to vent. This process sterilizes harmful pathogens and it can functionally be considered to be a composting toilet, in order to decompose fully. The final product is an organic fertilizer in your flower garden.

Easy change

When you sit down, the unique pressure seat is pressed against the toilet seat and is easy to clean.

Average frequency of use

1. Villa 9200 is delivered complete and simple to install. It can be put in a wall and a 2.36” (60 cm) long hose for urine waste.

Concealing view screen

When you sit down, the unique pressure seat is pressed against the toilet seat and is easy to clean.

Separate® PRIVY

Model 500 • Upgrade your softside

The Separett Privy is a water-separation kit that can be easily fitted into an existing product line. Urine and solids are kept separate, thanks to the polypropylene separator that is slightly tilted inwards, ensuring that the solids do not touch the urine. The Privy is ready to be used in a fully operable and easily transportable container. Under conditions of the Outhouse it is the ideal toilet for those without any running water.

Separate® INSULATED SEAT

Model 300 • Comfort for hefty users

Please use the seat in an outdoor toilet. Suitable diameter 1 1/5” (30 mm) thick. Made from corrosion-resistant polypropylene with a ventilation grid inside. Easy to use.

Installation Separate® VILLA®

Installation: There are no temporary array restrictions for areas where the Villa is to be installed. The Villa will function in winter and summer, and is functional in areas with heavy frost. The Villa 9200 will not leak in case of a malfunction due to the unique 8-part compression fitting. The Villa 9200 has been thoroughly tested and is therefore not prone to leaks. It is also portable, i.e. the vents can be connected to the main ventilation grid. The urinozonic grate does not need maintenance.

Separator® RESCUE CAMPING

Model 25 • The anywhere toilet

Separator® Rescue Camping is a special kit that has been developed especially for use in areas that are not accessible to running water. It is an economical solution for temporary use.

The Rescue Camping Kit includes:

- A battery-powered water-digester, which provides easy and economic access to running water.
- A complete 'practical equipment bag'.
- A complete 'practical equipment bag'.
- Extra durable, extra-durable PP container and place it in a suitable location outdoors. Add some soil and put the lid on with a slight opening; this allows the urine to vent. This process sterilizes harmful pathogens and it can functionally be considered to be a composting toilet, in order to decompose fully. The final product is an organic fertilizer in your flower garden.

Separett – a complete toilet system for vacation and residential homes

Enjoy your cottage

For 30 years, Separett has manufactured toilets designed to satisfy your need for comfort – wherever you may be. You should feel right at home when you are at your cottage, vacation home or anywhere else where there is no access to a pipe system. Thanks to the continual development of technology, design and functionality, Separett toilets are now even more advanced than ever. That is why Separett toilets are sold all over the world, from the dry heat of Africa to the wet soil of Hawaii.

Benefits for the environment

Separett wants to contribute to a green and sustainable environment for present and future generations. A Separett toilet modelled on nature is the greatest benefit to the environment. Moreover, the operation process makes it possible to use the waste back on site as an organic fertilizer. The benefit is you: a toilet solution without odours.

Easy handling of the liquid waste

Thanks to this process of separation, it is easy and safe to handle the liquid waste with simple tools. Depending on your wishes and options you have extra choices for evacuating the urine, connecting it to the greywater system, to a leaching bed or to a soak away. A Separett Ejektortank is an excellent choice when you wish to recycle the natural fertilizer from the urine in your flower gardens.

Unlimited Capacity

When the urine, which accounts for about 85% of the volume, is removed the storage capacity increases greatly. The solid waste container is replaceable. Normal use by a family of four requires the container to be changed only every 3-6 weeks, giving the toilet virtually unlimited capacity. The remainder, dried solids and toilet paper, is easily lifted out through the back wall or gable. Also, the energy-efficient fan will ensure that the toilet or shower area free of moisture and odours. With reservation for alterations.

Accessories

Separett Ejektortank

Ejektortank is easy to install, has no moving parts and automatically evacuates the urine: in your flower garden or wherever you please. Access to water with a minimum pressure of 2.5 bar (250 kPa) is required. The Whilst tank is sufficient for holiday houses, when emptied every second or third week. A fan indicates when the tank is full. The Ejektortank urine outlet and water inlet is supplied automatically without the need for user intervention. The Ejektortank connects to a 50-liters garden hose. A 33-feet (10 m) Ø3/4” emptying hose with a nozzle is included. The hose can be extended to 66-feet (20 m).

The Ejektortank includes the following: 150-liters garden hose, 10.5’’ (25 cm) Ø3/4” mix nozzle. (475 mm). Height 18 1/4” (465 mm). Diameter 18 3/4” (475 mm).

Separett Waterless toilets
Separett – a complete toilet system for vacation and residential homes

Enjoy your cottage

For 30 years, Separett has manufactured toilets designed to satisfy your needs so that you feel right at home when you are at your cottage, vacation home or anywhere else where there is no access to a public system. Thanks to the continual development of technology, design and functionality, Separett toilets are now more advanced than ever. This is why Separett toilets are used all over the world, from the dry heat of Africa to the icy cold of Greenland.

Benefits for the environment

Separett wants to contribute to a green and sustainable environment for present and future generations. A Separett toilet needs neither water to flush with, nor a separate sewage treatment, which is a great benefit to the environment. Moreover, the separation process makes it possible to recycle the waste back into nature as an organic fertilizer. The benefit to you is a toilet that isOdour free, Waterless, Odour free, Waterless

Easy handling of the liquid waste

Thanks to the process of separation, it is easy and safe to handle the liquid waste with simple tools. Depending on your wishes and options you have extra choice for evacuating the urine, connect it to the greywater system, to a leaching bed or soak away or to the tank. The Separett Ejektortank is an excellent choice when you wish to recycle the natural fertilizer that is stored in your flower gardens.

Unlimited Capacity

When the urine, which accounts for about 65% of the volume, is removed the storage capacity increases greatly. The solid waste, faeces and toilet paper, are routed separately which means the processes that cause unpleasant odours never occur. Thanks to this, the ventilation can be set straight through the back wall or gable. Also, the efficient liquid separation under the toilet ensures that odours never occur.

Separett conquers unpleasant odours

Until now, waterless toilets meant unpleasant odours. When urine and faeces become mixed together, the combination starts to ferment and putrefy. Until now, waterless toilets meant unpleasant odours. When urine and faeces become mixed together, the combination starts to ferment and putrefy. Separett – a complete toilet system for vacation and residential homes
